DevOps / Site Reliability Engineer (SRE) with 3+ years of experience in Azure, AWS, and GCP cloud infrastructure, Kubernetes, CI/CD automation, Infrastructure as Code, observability, and incident management. Currently operating a regulated compliance-recording platform serving 70+ enterprise customers, primarily global banks, with a focus on reliability, high availability, and eliminating operational toil through automation

PROFESSIONAL EXPERIENCE

Software Engineer – Site Reliability / Cloud Operations: Xoriant (Client: NICE) Jan 2026 – Present

- Operate and automate a regulated Microsoft Teams compliance-recording platform (NTR-X) on Azure serving 70+ enterprise customers, primarily global banks and financial institutions, as part of a shared operations team
- Automated terminal-driven bot deployment setup with a script that generates and updates the 20–25 configuration files each deployment requires from a single Excel input sheet (single source of truth), eliminating repetitive manual editing
- Built OS-patching runbooks per customer lane and a parent runbook that orchestrates them with isolated outputs per lane
- Wrote KQL on Application Insights telemetry to separate genuine recording-bot failures from false positives (autoscale warm-up noise, benign race conditions), eliminating recurring false critical alerts and surfacing a production defect escalated to R&D
- Led incident triage, troubleshooting, and root cause analysis across Azure services, VMs, and application components, including blob-storage upload failures with compliance impact
- Executed NTR-X version upgrades and customer environment conversions with structured pre-checks, rollback planning, and post-deployment validation to keep downtime minimal
- Built PowerShell tooling for log collection, RabbitMQ backups, bot/service management, and Azure file-share mounting, and designed Azure Monitor and Application Insights health dashboards across customer environments
- Built internal AI-assisted tooling with Claude to streamline log analysis, alert triage, and operational reporting, freeing up engineering time in daily operations

DevOps/Implementation Engineer: Amagi **Jan 2025 – Aug 2025**

- Configured AWS and GCP infrastructure for new channel launches, ensuring 99.99% uptime while supporting 3x growth in active users
- Automated repetitive deployment tasks with Terraform, Python, and shell scripting, standardizing workflows across dev, QA, and production environments
- Built CI/CD pipelines in GitHub Actions and Jenkins, accelerating release timelines by 42% and enabling quick rollback on QA test failures
- Maintained ArgoCD-based GitOps deployments on Kubernetes, improving version rollback reliability and deployment success rate
- Integrated AWS MediaLive and MediaConnect for live and VOD workflows, maintaining consistent delivery with negligible packet loss

DevOps Engineer: XchangeTechs **Jun 2023 – Jan 2025**

- Managed deployments across dev, QA, and production for microservices, maintaining under 2 minutes of downtime per release on a weekly release cycle
- Provisioned AWS infrastructure with Terraform across environments, eliminating configuration drift and manual dependency management
- Built CI/CD pipelines in Jenkins and GitHub Actions, reducing deployment delays and improving release consistency
- Containerized an automated test suite with Docker and scheduled hourly runs as a Kubernetes CronJob in the cluster
- Streamlined operational workflows using GCP services and scripting, reducing manual job execution time by 40%

- Configured IAM roles, VPC rules, and EC2 policies across AWS accounts, strengthening access control and security rule validation

SKILLS

- Cloud Platforms: Azure, AWS, GCP
- Scripting & Languages: PowerShell, Python, Bash, Groovy, SQL, YAML
- CI/CD & Automation: Jenkins, GitHub Actions, ArgoCD (GitOps), Azure Automation, CI/CD Pipelines
- Infrastructure as Code: Terraform, CloudFormation, Ansible, Helm
- Containers & Orchestration: Docker, Kubernetes
- Monitoring & Observability: Azure Monitor, Application Insights, KQL, Prometheus, Grafana, ELK Stack, Datadog, Splunk
- Tools & Platforms: Git/GitHub, Jira, Confluence, RabbitMQ, Linux/Unix, Nginx, Apache, HashiCorp Vault
- Networking & Security: SSL/TLS, TCP/IP, API Gateway
- Practices: Site Reliability Engineering, Incident Management, Root Cause Analysis, GitOps, Automation

PROJECTS

Sleep Country Project **Apr 2024 – Jan 2025**

- Designed GCP workflows and schedulers to automate deployments, reducing manual tasks through job orchestration
- Introduced monitoring with Stackdriver and Prometheus, flagging 78% of potential failures during staging phases, allowing pre-deployment fixes and reducing emergency patches post-release

Ethereal Engine Project **Jul 2023 – Mar 2024**

- Connected OpenSearch to microservices, aggregated logs centrally, reducing manual log search time using queries
- Employed Bash scripts automating Minikube and MicroK8s cluster operations, leading to a 70% decrease in manual configuration time and reducing error-prone setup procedures

EDUCATION

D. Y. Patil International University **Jun 2021 – Jun 2023**
Master of Computer Application in Cyber Security, CGPA: 7.68
MIT World Peace University **Jun 2018 – Jun 2021**
Bachelor of Computer Application, CGPA: 7.34

CERTIFICATIONS

- Certified Ethical Hacker (CEH) from EC Council **May 2023**
- DevOps Certification from Udemy **Mar 2023**
